Heavier gates get more hinges

Panel dimensions

Lock-gap Hider on a Double Gate

Lock-gap Hider on a Single

The secondary panel lock-down-stick is activated with a lever inside panel.

Panel profile caps keep moisture out

Lock-down stick on the main panel (moves first) is activated by turning and pulling down the stick

Lever Handle

MJN-CT

Push-Pull Handles

MJNG-CT

MJNT-CT
MJNT-CC

MJNT-CT

MJNT-CC

Japanese Dimple Key
Duplicates are available
upon request

Removable Thumb-turn

Thumb-turn on the Lever Handle

You can also have key
access only on both sides

Thumb-turns are a
super convenient locking
option, however, on
a shorter gate, Key on
both sides would be the
safer option.

MCE-HM Handles

LMN-01 *Lever Handle with Thumb-turn*

LMN-03 *Key on both sides*

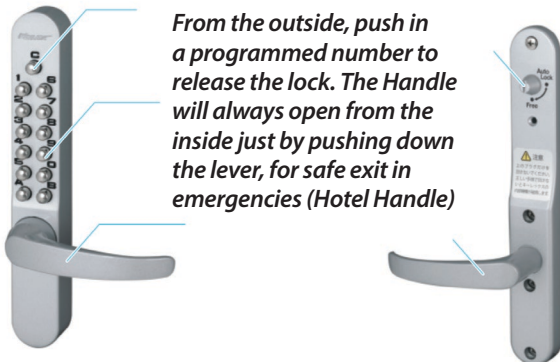

LMN-04 *No key needed on inside (Hotel Handle)*

MJN-KX-S

Optional Digit- Entry System

From the outside, push in a programmed number to release the lock. The Handle will always open from the inside just by pushing down the lever, for safe exit in emergencies (Hotel Handle)
